=== AGENT ACCURACY

=== MILESTONES

foundation:

```
[x] version control
[x] written constraints
[x] kill switch
[x] file jail
[x] shell allowlist
[ ] action log
[x] offsite backup habit
[x] README
```

agent:

```
[x] proposal loop
[x] human gate on all
[ ] correctness logged
[x] scoring script
[ ] 30+ graded proposals
[x] schema validator
```

models:

```
[x] local inference
[x] remote quick tier
[x] tier router
[x] fallback chains
[x] gate survives fallback
```

capability (not started):

```
[x] persistent memory
[x] paper trading engine
[x] scheduler / daemon
[ ] self-debug loop
[x] multi-step planning
```

Project Plan Status (from documents)

Based on the JARVIS_X_COMPLETE_GUIDE, JARVIS_X_CONTEXT_HANDOFF, and v2 Ascension plan:

- ✓ Week 1: Foundation (Ollama + models, Node, Python, tests) — confirmed
- ✓ Week 2: Core Memory + Persistence — partially? (SQLite + Chroma?)
- ✓ Week 3: Router + Code Review Loop — ??
- ✓ Week 4: Voice + Web UI — TTS works, Web UI built
- ✓ Week 5: Voice Engine (Piper) — TTS uses Piper/AR-TTS

- ☒ Week 6: Market Intelligence — ??
- ☐ Week 7: App + Web UI (PWA) — *frontend built but not served as PWA?*
- ☐ Week 8: Deployment — *not yet*

The above is a high-level estimate. The actual completion % should be derived from the plan.

Next Steps / Recommendations

- If any test above failed, debug that component first.
- Ensure the web UI is served (npm run preview or dev) and accessible.
- The self-debug loop and accuracy gates are not yet implemented (Phase 2).
- The repo privacy: check if it's public – if so, make private immediately.
- Consider filing a provisional patent before any public disclosure.
